SUMMARY

AI Developer with 4+ years engineering production-grade backends for banks and financial platforms. I bridge classic Java/Spring systems with modern AI workloads — RAG pipelines, LLM gateways, fraud-signal services and decisioning APIs — while keeping latency, observability and compliance at enterprise standards.

EXPERIENCE

MuleSoft Developer

OCT 2025 — PRESENT

Onsite Techcombank · Enterprise Integration

Building and operating MuleSoft-based integration layer between core banking, payment, card and CRM systems for one of Vietnam's largest commercial banks.

- Designed and implemented MuleSoft integration flows (REST & SOAP) connecting core banking, card management and downstream services.
- Modeled enterprise APIs (RAML / OpenAPI) and applied API-led connectivity (System / Process / Experience layers).
- Hardened security with OAuth2, mTLS and Anypoint policies; tuned throughput, retry and circuit-breaker behavior for production traffic.
- Worked closely with banking domain teams on data contracts, transaction integrity and observability across the integration mesh.
- Lays the groundwork for AI-augmented services (decisioning, fraud-signal, RAG over internal docs) sitting on top of the integration layer.

MuleSoft · Anypoint · REST · SOAP · OAuth2 · DataWeave · Java

Java Developer

MAY 2025 — OCT 2025

Onsite TPBank · Approve System

Internal approval workflow supporting enterprise business processes.

- Developed, maintained and enhanced the workflow system.
- Designed and integrated RESTful APIs between internal services.
- Optimized application performance and database queries.
- Supported production issues and improved system stability.

Java · Spring Boot · REST · Oracle

Java Developer

OCT 2024 — MAY 2025

Onsite NTT DATA · BEAD (Japan)

Japanese enterprise customer-management & authorization platform on a low-code Excel-driven configuration approach.

- Core developer for system migration, upgrades and long-term maintenance.
- Maintained Java backend services, SQL queries and Vue.js API integration.
- Implemented unit tests and authored technical documentation.
- Worked directly with Japanese stakeholders on change requests and incidents.

Java · Vue.js · SQL · JUnit

Java Developer

MAR 2024 — OCT 2024

Onsite LPBank · T24 System

Development and maintenance of the T24 core banking platform.

- Primary developer on the T24 platform.
- Built API connections for seamless inter-system data interchange.
- Performed system, code and database optimizations.

T24 · Java · API · SQL

Java Developer

MAY 2022 — MAR 2024

Savis Digital · Webra · SigningServer · WSO2 APIM

- Webra — digital-certificate access, registration, issuance & management.
- SigningServer — specialized software for digital-certificate management & signing.
- WSO2 APIM — developed, enhanced and maintained APIs and gateway components.
- Deployed services across DEV/PROD; optimized DB and application performance.

Java · Spring Boot · WSO2 · PKI · PostgreSQL

Java Developer · Intern 'Junior

AUG 2021 — MAY 2022

Gtel-ICT · Ministry of Public Security projects

- Document Management Software — staff document reception & processing.
- Citizen Identity System — search and validate citizen identities.
- Records Storage & Security Software — license and citizen-record administration.
- Unit testing, code refactoring, DB optimization, functions & procedures.

Java · SQL Server · JUnit

Java Developer · Intern 'Fresher

JAN 2021 — AUG 2021

CRM Viet · CRM platform for the Japanese market

Customer info management, business phone with calls/SMS, and social-network management with scheduled posts.

- Backend with Java, Spring Boot, Maven and JPA on Oracle.
- Frontend integration with ReactJS; unit testing and DB optimization.

Java · Spring Boot · JPA · Maven · React · Oracle

EDUCATION

Posts and Telecommunications Institute of Technology (PTIT)

2024 — PRESENT

Distance Learning Program · Information Technology

Currently pursuing a formal IT degree alongside full-time engineering work — deepening foundations in distributed systems, software architecture and applied AI.

- Coursework focused on data structures, networking, software engineering and modern AI / data fundamentals.
- Continuous self-study on LLM systems, RAG architectures and production AI for fintech use cases.

Bach Khoa — Aptech

JUL 2018 — APR 2020

Major: Java

- Foundational Java engineering — OOP, web frameworks, databases, and enterprise patterns.
- Extracurricular: Soccer.

SKILLS

AI & LLM

RAG pipelines, LLM gateways (OpenAI / local), Vector search (pgvector), Prompt engineering

Backend	Java, Spring Boot, JPA, Hibernate
Fintech & Banking	T24 Core Banking, Payment / decisioning APIs, PKI & digital signing, Compliance-aware design
Databases	PostgreSQL, Oracle, MySQL, SQL Server
API & Integration	RESTful API, WSO2 APIM, API Gateway, Event-driven
Quality · DevOps	JUnit · Mockito, Redis · Docker, Observability, Technical Documentation

SELECTED PROJECTS

Enterprise Integration — Techcombank

2025 — Present

API-led integration, security, observability · banking-grade

MuleSoft-based integration layer connecting core banking, payment, card and CRM systems for one of Vietnam's largest commercial banks. Designed REST/SOAP flows, applied API-led connectivity (System / Process / Experience), and hardened with OAuth2, mTLS and Anypoint policies. Foundation for AI-augmented services on top of the integration mesh.

MuleSoft · Anypoint · REST · SOAP · OAuth2 · DataWeave · Java

Approve System — TPBank

2025 — Present

Workflow engine, internal REST APIs, performance & DB tuning

Internal approval workflow platform supporting enterprise business processes. Designed and integrated REST APIs between internal services, optimized DB queries and supported production stability.

Java · Spring Boot · REST · Oracle · Performance

BEAD — NTT DATA (Japan)

Oct 2024 — May 2025

Authorization, low-code Excel config, Vue Java integration

Japanese enterprise customer-management & authorization platform built on a low-code Excel-driven configuration approach. Owned migration, upgrades and long-term maintenance.

Java · Vue.js · SQL · JUnit · Migration

T24 Core Banking — LPBank

Mar 2024 — Oct 2024

Core banking integrations, API plumbing, DB optimization

Active development and maintenance of the Temenos T24 core banking platform. Built API connections for seamless inter-system data exchange and tuned performance.

T24 · Java · API · SQL · Banking
